Romanian office of  
the WABAG Group

## Junior Process Engineer

We welcome all those who want to make a difference with their work. In this respect, neither age, gender nor origin count, but talent, the will to perform and enjoyment of the work.

### Responsibilities and duties

- Preparation technology documentation as required
- Participation to process calculations and evaluations
- Preparation of engineering design deliverables for tenders and FS's
- Cooperation with suppliers during process design, construction and commissioning
- Continuous learning of the latest technologies, design tools & guidelines
- Participation in Installation, Start-up, Commissioning and fine tuning of water / wastewater treatment plants (and Pilot Plants)

### Your qualifications

- Completed studies in process / environmental engineering, chemistry, biotechnology or similar
- Ability to analyze specific documents of process engineering is a plus
- Willingness to learn process calculation
- Competent computer literacy; AutoCAD 3D Plant/P&ID is a plus
- Independence, very good communication and team skills
- Available for travel 20% of the working time

### We offer:

- A multinational high-tech company which offers engineers an exciting and extremely diversified working environment
- A varied and challenging role in a multinational group and highly innovative company
- A meaningful job where talented employees in all professional fields contribute to environmental protection
- Development and further training opportunities to shape and achieve your career goals
- Team spirit and a passion for water technologies
- A sustainable, down-to-earth and well-established company with 98 years of experience
- Competitive and performance-based remuneration
